

SMART Summer School

12th - 16th
July 2021

*"Understanding marine hydrogeology through
groundwater modelling"*

**An introductory course on groundwater modelling by
leading experts in computational hydrogeology.**

The SMART and MARCAN projects at GEOMAR (Germany) and University of Malta (Malta) are hosting a **FREE** online summer school course for undergraduate, graduate and postgraduate students, as well as doctoral and postdoctoral researchers.

Background: hydrology, geology, environmental sciences, marine geophysics, and related backgrounds (ideally with an interest in computational hydro-geology and reactive transport phenomena).

Some prior knowledge of mathematical modeling and basic programming (ideally in C++) will be an advantage.

Limited to **20 participants**. If exceeded, selection will be based on the evaluation of applicants' CVs and motivation letters.

Registration: 15th March till 1st June | **Acceptance:** 15th June

Joining instructions will be provided at a later date.
